

FraudLens v2.0

AI-Assisted Financial Statement Fraud Detection Report

Generated: 09 October 2026, 14:41

Executive Summary

FraudLens analysed **3** companies using the Beneish M-Score model, Z-score anomaly detection, and Isolation Forest machine learning.

High Risk: 0 companies **Medium Risk:** 0 companies **Low Risk:** 3 companies

Company Risk Classifications

Company ID	Company Name	M-Score	Fraud Probability	Risk Classification
1	Company A	-2.2124	9.2%	Low Risk
2	Company B	-2.3290	19.0%	Low Risk
3	Company C	-2.3026	9.0%	Low Risk

Detailed Company Interpretations

Company A

Company A is classified as LOW RISK with a fraud probability of 9.2%. No immediate action required based on current indicators.

Key Findings:

- Beneish M-Score of -2.2124 exceeds the -2.22 threshold — the model flags this company as a likely manipulator.

Company B

Company B is classified as LOW RISK with a fraud probability of 19.0%. No immediate action required based on current indicators.

Key Findings:

- Mild increase in receivables relative to sales (DSRI: 1.25). Monitor for continued growth.
- Beneish M-Score of -2.3290 is below the -2.22 threshold — no manipulation indicated by the Beneish model.

Company C

Company C is classified as LOW RISK with a fraud probability of 9.0%. No immediate action required based on current indicators.

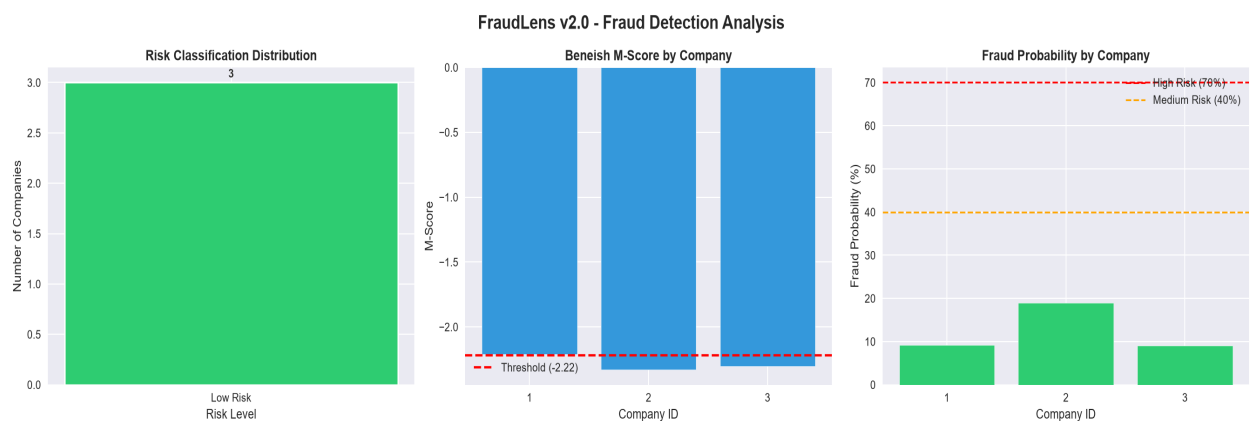

Key Findings:

- Beneish M-Score of -2.3026 is below the -2.22 threshold — no manipulation indicated by the Beneish model.

Overall Conclusion

No High Risk companies were identified in this analysis. All companies analysed fall within acceptable risk parameters based on current financial statement data. Continued monitoring is recommended.

Visual Analysis

How to Read These Charts:

Chart 1 — Risk Classification Distribution: Shows how many companies fall into each risk category. A healthy portfolio should show most companies in the Low Risk (green) category. Any High Risk bars require immediate attention.

Chart 2 — Beneish M-Score by Company: Each bar represents one company's M-Score. The red dotted line marks the -2.22 threshold. Companies whose bars appear above this line are flagged as likely manipulators by the Beneish model.

Chart 3 — Fraud Probability by Company: Shows the overall fraud probability score assigned by FraudLens. Bars crossing the red line (70%) are High Risk. Bars crossing the orange line (40%) are Medium Risk. Green bars below 40% are Low Risk.

Disclaimer: This report is generated by FraudLens for investigative screening purposes only. Findings should not be treated as conclusive evidence of fraud. Human judgment and further investigation are required before any conclusions are drawn.
